AC ELECTRICAL TESTING AND TROUBLESHOOTING GUIDE

1.2. a.c. Electrical measurements. Usually a.c. electrical measurements are known as a method to monitor curing and aging processes of thermoset matrix systems . It has been shown, that it is also possible to perform damage detection and strain recording for CFRP with that method . The laminate is taken as a dielectric material, where both the measured capacitance and dissipation are changing with the applied strain and damage.

Cable testing is critical to understanding the health of underground electrical distribution cables before they are energized for service. This can be done by applying a DC or 60Hz AC voltage to the cable using a low current source (HiPot test), at a voltage of 2-3 times the continuous rated voltage of the cable.
