ASPEN PLUS Example Problems This section is devoted to example reaction problems. The problems were taken from the 4th Edition of Elements of Chemical Engineering by H. Scott Fogler. Both problems come from Example 8-5, the first is an adiabatic reactor and the second is a PFR with constant cooling temperature.

### Process Simulation examples in ASPEN—YouTube

1. Aspen Introduction. ASPEN is a process simulation software package widely used in industry today. Given a process design and an appropriate selection of thermodynamic models, ASPEN uses mathematical models to predict the performance of the process. This information can then be used in an iterative fashion to optimize the design.

Aspen Tutorial #6 57 Figure 4: Completed DSTWU Input Window For our benefit, we would also like Aspen to produce a table of reflux ratio vs. the total number of calculated theoretical trays. This can be easily done by selecting the Calculation Options tab at the top of the DSTWU input window. Check the box corresponding to this calculation now.
