In this groundbreaking union of art and science, rocker-turned-neuroscientist Daniel J. Levitin explores the connection between music—its performance, its composition, how we listen to it, why we enjoy it—and the human brain. Taking on prominent thinkers who argue that music is nothing more than an evolutionary accident, Levitin poses that music is fundamental to our species, perhaps even more so than language. Drawing on the latest research and on musical examples ranging from Mozart to Duke Ellington to

Van Halen, he reveals: □ How composers produce some of the most pleasurable effects of listening to music by exploiting the way our brains make sense of the world □ Why we are so emotionally attached to the music we listened to as teenagers, whether it was Fleetwood Mac, U2, or Dr. Dre □ That practice, rather than talent, is the driving force behind musical expertise □ How those insidious little jingles (called earworms) get stuck in our head A Los Angeles Times Book Award finalist, This Is Your Brain on Music will attract readers of Oliver Sacks and David Byrne, as it is an unprecedented, eye-opening investigation into an obsession at the heart of human nature.

From the author of the groundbreaking New York Times bestseller The Female Brain, here is the eagerly awaited follow-up book that demystifies the puzzling male brain. Dr. Louann Brizendine, the founder of the first clinic in the country to study gender differences in brain, behavior, and hormones, turns her attention to the male brain, showing how, through every phase of life, the "male reality" is fundamentally different from the female one. Exploring the latest breakthroughs in male psychology and neurology with her trademark accessibility and candor, she reveals that the male brain: -is a lean, mean, problem-solving machine. Faced with a personal problem, a man will use his analytical brain structures, not his emotional ones, to find a solution. -thrives under competition, instinctively plays rough and is obsessed with rank and hierarchy. -has an area for sexual pursuit that is 2.5 times larger than the female brain, consuming

him with sexual fantasies about female body parts. -experiences such a massive increase in testosterone at puberty that he perceive others' faces to be more aggressive. The Male Brain finally overturns the stereotypes. Impeccably researched and at the cutting edge of scientific knowledge, this is a book that every man, and especially every woman bedeviled by a man, will need to own.

The classic personal account of Watson and Crick's groundbreaking discovery of the structure of DNA, now with an introduction by Sylvia Nasar, author of *A Beautiful Mind*. By identifying the structure of DNA, the molecule of life, Francis Crick and James Watson revolutionized biochemistry and won themselves a Nobel Prize. At the time, Watson was only twenty-four, a young scientist hungry to make his mark. His uncompromisingly honest account of the heady days of their thrilling sprint against other world-class researchers to solve one of science's greatest mysteries gives a dazzlingly clear picture of a world of brilliant scientists with great gifts, very human ambitions, and bitter rivalries. With humility unspoiled by false modesty, Watson relates his and Crick's desperate efforts to beat Linus Pauling to the Holy Grail of life sciences, the identification of the basic building block of life. Never has a scientist been so truthful in capturing in words the flavor of his work.

The portraits of Freud, Shakespeare, Einstein, and Leonardo da Vinci on the cover symbolize a major theme of *How We Know*—that the creative imagination plays a role in the sciences no less than in the arts, and that scientific discoveries have an

aesthetic beauty of their own that can be enjoyed by the nonscientist. Written to be understood by readers without proper scientific training, the main features of scientific method are illustrated by the use of case histories of research and discovery. The book also explores such questions as the nature of scientific understanding of the world, how theories are invented, how they are tested experimentally, and whether the scientist is ever "objective." The broad scientific experience of Martin and Inge Goldstein has made them aware not only of the distinctive features of diverse disciplines, but also of the common ground all fields of science share. This book was written in the belief that these common features of the scientific enterprise can be communicated to the nonscientist, and that it is important both for science and for society as a whole that this be done. *How We Know* offers help to those mystified and confused by the methods and aims of science. It firmly establishes science as a product of human beings acting in human ways, a process where the search for beauty can be as compelling as the search for truth.
