Wheel and Pinion Cutting - Dave West Clocks

Wheel and Pinion Cutting
Wheel Cutters. These are
form relieved multi-tooth
gear cutters. The one on the
right is for a watch wheel.
The one on the left cuts the
bronze asymmetric gears for
a Curta mechanical
calculator. These cutters
were made using the
eccentric arbor method
described and illustrated in
the following sections.

Having read many books about watchmaking, no book so far has covered the process of wheel and pinion cutting quite like this one. Where some books will just cover one or two ways of doing something, the author goes in-depth on the various different methods that he knows of, so the reader has a full arsenal of methods to use and see what works for them.

A Historical
For many years we have been involved in supplying clock parts and brass castings for the restoration of antique clocks, including English Longcases, Fusee, French, European and American. Some of the fields we specialize in are making brass or steel clock hands, Gear cutting for instruments and wheel and pinion cutting for clocks. Brass clock dial making and restoration, Complete or part movement restoration, Prototype making for industry, and complete clock movement making.

In the foreground the bars are fed through and the multiple tools either side of the collet in the centre then cut the material. The same process as is used in the previous section on profile turning. These machines can produce the blanks for wheels and pinions which are then cut later in other machines as well as pins, screws, canons etc.
