with examples of key
proteins in their bio

This volume looks at modern computational strategies and techniques used in GPCR drug discovery including structure and ligand-based approaches and cheminformatics.

The chapters in this book describe how these approaches can be

Bookmark File

PDF White

applied to address key drug discovery issues, such as receptor structure modelling, function and dynamics, prediction of protein-water-ligand interactions and binding kinetics, free energy of binding, interconversion between agonists and antagonists, deorphanization of GPCRs, and the

Bookmark File PDF White

discovery of biased and
allosteric modulators.

Written in the highly
successful Methods in
Molecular Biology
series format, chapters
include introductions to
their respective topics,
lists of the necessary
software and tools, step-
by-step, readily
reproducible modelling
protocols, and tips on
troubleshooting and

informative, as will
scientists already
actively researching
nucleotide signaling.

This book introduces
readers to the latest
advances in G protein-
coupled receptor
(GPCR) biology. It
reviews our current
understanding of the

Bookmark File

PDF White

structural basis of ligand binding and allosteric mechanisms, following a decade of technological breakthroughs. Several examples of structure-based drug discovery are presented, together with the future challenges involved in designing better drugs that target GPCRs. In turn, the book illustrates

Bookmark File PDF White

the important concept of GPCR biased signaling in physiological contexts, and presents fluorescent- and light-based methodologies frequently used to measure GPCR signaling or to trace their dynamics in cells upon ligand activation. Taken together, the chapters provide an essential overview and

Bookmark File

PDF White

toolkit for new scientific investigators who plan to develop GPCR projects. All chapters were written by experts in their respective fields, and share valuable insights and powerful methodologies for the GPCR field.

This volume explores techniques used to detect lipids attached to

Bookmark File

PDF White

proteins, to analyze the function of lipid modifications, and to characterize the enzymes that add and remove lipids from proteins. The book is organized into seven parts: Part One describes chemically-based strategies to identify substrates for protein lipidation that can be applied to

Bookmark File

PDF White

individual proteins or globally using proteomics. Part Two focuses on the enzymes that remove fatty acids from proteins and provides methods to monitor protein biogenesis and palmitate turnover. Part Three addresses biochemical and cellular characterization of DHHC S-

Bookmark File

PDF White

acyltransferases, a family of enzymes with 23 members encoded by the human genome. Part Four presents the SwissPalm 2 database and tips on how to use it effectively. Part Five focuses on fatty acylation that occurs in the lumen of the secretory pathway. Parts Six and Seven conclude the book with methods
